Federal Signal Announces New Product Improvement ***Battery Charger and Charger Leads***

University Park, IL, February 2, 2007 – As part of Federal Signal's continued mission to bring the greatest value to customers, effective February 2, 2007 Federal Signal has made improvements to their battery chargers and charger leads.

Federal Signal has replaced the existing charger circuit breaker with a GTE SYLVANIA SB613E3H circuit breaker which has a thermal cutoff of 140 degrees Celsius. This change will further differentiate Federal Signal's value and quality from the competition.

Federal Signal has also increased the length of battery cables by two inches to simplify installation and on-going battery maintenance.

The new charger assembly can be utilized in all current and previous DC siren controller models including the 2001DC, DCFCB, and DCFCT(B) models.
